SUMMARY

Backend Software Engineer with 3 years of experience building scalable microservices using Java and Spring Boot. Experienced in Kubernetes, GCP, and distributed systems. Competitive programming enthusiast LeetCode Guardian (Rating 2700+), CodeChef 6 Star Coder (Rating 2300+), CodeForces Master (Rating 2100+) with strong algorithmic and system design skills.

TECHNICAL SKILLS

Programming Languages: Java, Python, JavaScript
Frameworks & Databases: Spring Boot, NodeJS, ReactJS, MySQL, MongoDB, Oracle SQL
Tools: Git, Google Cloud Platform (GCP), Kubernetes, Kafka, Docker
Machine Learning: Scikit-learn, TensorFlow, Keras, XGBoost, NumPy

PROFESSIONAL EXPERIENCE

Sagitec Solutions - Pune, Maharashtra, India August 2022 – August 2025

Software Engineer

- Designed and developed a retirement management system for a California public pension fund using Java, Spring Boot, and microservices architecture.
- Architected and implemented the Service Retirement Calculation Module as an independent microservice, ensuring accurate benefit computation and clear separation of concerns.
- Built RESTful APIs enabling inter-service communication, supporting scalable server interactions across multiple services.
- Integrated backend services with frontend components using JavaScript and AJAX, enabling real-time calculations without full page reloads.
- Containerized services using Docker and deployed them on Kubernetes, improving scalability, fault tolerance, and deployment consistency across environments.

CODING PLATFORMS and ACHIEVEMENTS

- Meta HackerCup 2025 – Ranked 186 (Semi Final Round)
- Google Kickstart 2020 - Ranked 609 (Round D), 793 (Round E), and 194 (Round H)
- Guardian on LeetCode (Rating 2700+)
- 6 stars on CodeChef (Rating 2300+)
- Master on CodeForces (Rating 2100+)

CERTIFICATIONS

Google Cloud Platform (Associate Cloud Engineer)
url: https://google.accredible.com/ed4a5c08-4494-4953-b5ed-c18c54ed108f

EDUCATION

Lovely Professional University, Punjab, India July 2018 - June 2021
B.Tech in Computer Science and Engineering CGPA: 8.00

PROJECTS

Sign Language Alphabet Classification

Tools: Python, NumPy, Pandas, Keras, Pickle, Scikit-Learn, TensorFlow

- Built a machine learning model to classify American Sign Language (A–Z) in real time.
- Achieved 98% accuracy with Random Forest Classifier implemented using the Scikit-Learn library.

Distributed URL Shortening Service

Tools: Java, Spring Boot, REST API, PostgreSQL, Redis, Kafka (Redpanda), Nginx, Docker Compose, HTML, CSS, JavaScript

- Architected a distributed URL shortener in Java 21/Spring Boot containerized with Docker Compose behind Nginx, using PostgreSQL atomic range allocations and Base62 encoding to eliminate ID collisions.
- Optimized read throughput and latency via Redis caching, Bloom filters, and IP-based rate limiting, while streaming click events into Kafka (Redpanda) for decoupled, asynchronous geo-analytics.

Music Application

Tools: Java, Spring Boot, REST API, MySQL, HTML, CSS, JavaScript

- Developed a full-stack music streaming application using Java, Spring Boot, REST APIs, and MySQL.
- Designed a responsive and interactive UI with HTML, CSS, and JavaScript, including dynamic music playback controls.
- Implemented RESTful APIs for efficient management of music and user-related data.
